## 

## Strengthening:

- At six weeks post-operatively begin strengthening of the rotator cuff and scapular stabilizers as tolerated within the limits of motion achieved and while avoiding positions of impingement.

Begin scapular mobility exercises immediately as well.

Initiate active range of motion as tolerated.

- Avoid rotator cuff strengthening more frequently than three times per week to avoid tendonitis.
- Progress as tolerated.

Please provide with a home exercise program with a focus upon passive external rotation exercises, passive internal rotation exercises, and passive forward elevation exercises.	
Modalities  Heat before and ice after thera	py. Remaining modalities per therapist.
Frequency: 3 times/week	Duration: 6 weeks
